TECHNICAL SKILLS

Languages & Framework:	Java, Python, React JS, JavaScript, Typescript, Node JS, Express JS, Vite, Redux, SQL, Graph QL, Cloudscape Design System, HTML, CSS
Infra:	AWS (Lambda, Dynamo DB, CloudFront, CloudWatch, EC2, VPC, CDK), Docker, Terraform
Tools:	Cursor, Co-pilot, Git, NPM, Jest, Webpack, Playwright, VS Code, Intelli J

WORK EXPERIENCE

Warner Brothers Discovery | Software Development Engineer II — *Ottawa, Canada*, *Sept 2025 - Present*

- Collaborated with the CNN Underscored engineering team **to enhance the CMS user experience** by improving interface consistency, streamlining editorial workflows, and contributing to early UX and performance optimizations.
- Partnered with a team of two developers to architect and launch the CNN Underscored Awards using **Handlebars, JavaScript, CSS and Node.js**, creating a high-impact affiliate marketing engine that drove 15% revenue growth while meeting all project timeline.
- Conducted a technical spike to investigate and optimize **Core Web Vitals** using **Lighthouse** and **Chrome DevTools**, successfully identifying bottlenecks to reduce **Largest Contentful Paint (LCP)** and improve the overall performance score by 22%.
- Engineered an automated "Quick Picks" component using **Handlebars and Python-based APIs** to dynamically surface curated deals, streamlining the CMS editorial workflow and increasing click-through rates on high-margin affiliate offers.

Amazon | Software Development Engineer II — *Toronto, Canada*, *June 2021 – Sept 2025*

- Spearheaded the design and implementation of the Case Management feature within the Customer Service Application to enable **AWS Connect Task** creation and routing for customer issues. Successfully launched the feature for incubation testing, allowing the team to gather early feedback, validate key workflows, and inform improvements ahead of global rollout.
- Migrated a legacy application to a modern platform, contributing to its deprecation by building critical new features using **React JS**, **Cloudscape Design System and Java** microservices leading to a 40% increase in user adoption within the first month.
- Designed and delivered an end-to-end customer resolution microservice in **GraphQL** and **Java** on native **AWS**, improving query efficiency and driving measurable gains in customer satisfaction.
- Improved the global onboarding experience by developing an accessible and intuitive marketplace selection dropdown, driving a 30% increase in early onboarding of incubation users and simplifying future scalability through streamlined marketplace onboarding.
- Drove operational excellence by resolving high-severity production issues as part of the on-call team, contributing to improved service reliability and incident response.
- As **Scrum leader**, aligned early with PMs to clarify requirements, proactively reducing ambiguity and accelerating development throughput and led all Scrum ceremonies, improving delivery cadence and cross-functional collaboration.
- **Mentored an SDE intern** guiding them through onboarding, debugging, and architecture reviews, leading to the intern's successful project completion and conversion to full-time SDE.

Inquizity Metonia OPC Pvt Ltd | Intern + Software Developer — *Mumbai, India*, *May 2018 - Oct 2019*

- Collaborated with product managers and clients to gather requirements and translate them into clear specifications and UI mock-ups, incorporating user feedback.
- Developed front-end for three **Progressive Web Apps (PWAs)** using **Ionic 2/4** and **Angular 4/7**, delivering responsive and intuitive user interfaces.
- Provided user training and technical support, troubleshooting application issues to ensure smooth adoption and effective usage.

PROJECT

AI-Native Local Workspace Assistant (Self-Initiated Project) | Repo — *Feb 2026*
Technologies: Python, ChromaDB, Llama 3, Ollama, PyQt6, Watchdog, nomic-embed-text.

- Architected a **RAG pipeline** that transforms local file systems into an active workspace participant, enabling real-time semantic document retrieval based on user typing context.
- Engineered a local-first vector index and a multi-threaded UI to achieve high-accuracy retrieval of 100k+ files with a seamless ~5-second response time.
- Implemented an intelligent reasoning layer to provide contextual justifications for suggestions while maintaining automated data synchronization via background file monitoring.

EDUCATION

University Of Waterloo — *Waterloo, Canada*

Master of Engineering in Electrical and Computer Engineering
